

THE WORLD IN 30 MINUTES

HIDDEN HIGH TECH – SUPER-TECHNOLOGIES FOR THE MOBILITY OF TOMORROW

30' (ENG, GER)

Mobility is a concept that humans have pondered over for centuries, if not millennia. But how can we transport more people and freight? How do we make mobility as safe as possible? How do we make it environmentally friendly?

We enter the world of “hidden high-tech” – super technologies intended to make mobility and our cities safer and cleaner. Around the world, companies work on making manufacturing more efficient and environmentally friendly. We are visiting a Swiss company called Oerlikon, that develops and makes products for the aerospace and automotive industries, e.g. with 3D printing in industrial standard - high tech which is hidden under the engine cover.

Original Title:	Hidden High Tech
