CHILDREN OF THE SUN - WILD BEES & BUTTERFLIES

2 x 52' (ENG), 2x 45' (GER, FRE)

Discover nature's little helpers as they drift from flower to flower, pollinating as they go.

Bees and butterflies play an important role in the pollination of plants and the production of crops for human and animal consumption. The buzzing of the bees and the vibrant colours of butterflies are the staples of the tranquillity and raw beauty of the countryside – a place which beguiles the eyes and calms the soul. But with the hustle and bustle of modern day life, we tend to neglect the microscopic worlds embedded within our own; the symbiotic relationship between their worlds and ours. The film takes a step into their unknown world.
