CYBORGS: HUMAN MACHINES

45' (ENG, GER)

Over the past few years, technology has attracted more and more people, making life quicker and easier. Some people are now taking the next step:

they are fusing their bodies with technology to increase their abilities and expand their senses – real life cyborgs. They inject magnets into the fingers, with which they are able to sense electromagnetic fields, plant chips under the skin to open doors, implant devices into the skull with which they sharpen their senses. These people, who seem like a bunch of nerds, could be the pioneers of our technical future. Who are these people? And what drives them?

Original Title:	Maschinenmenschen – Wenn Technik unter die Haut geht
Year:	2017
Produced by:	Hoferichter & Jacobs, SWR, MDR
