THE PROTEOM CODE - JOURNEY TO THE CELL'S CORE

52' (ENG, GER, FRE)

When Craig Venter, the star of genome technology, joins forces with Apple and Google, in an investment, you know it's something big!

Theoretically, if we were to decode the complex CODE of proteins, the basic cellular structure of human beings would be protected from all forms of damage or deterioration. In essence, we would become immortal and no longer have to fear the uprise of artificial intelligence as humans would replace machines. But is this a desirable effect? Our entire ethical and cultural anthropology would dissolve into nothing as this hypothesis would divide the history of humanity into before and after this venture.

Original Title:	Der Proteom Code - Dem Geheimnis des Lebens auf der Spur
Year:	2017
Produced by:	Prounen Film, epo-film, CINEMATOGRAFICA Rome
