CREATING A GARDEN OF EDEN

45' (GER, ENG subs)

It's a paradise under glass. This small greenhouse is a place of sustainable innovations for our future.

The Tropic House in Tettau in Franconia is both a small park for visitors and employees and at the same time a modern research project. The University of Bayreuth has created a tropical environment through waste heat from industry, which enables the cultivation and breeding of tropical fruit, vegetables and fish. Exotic food from their own garden saves thousands of tons of CO2 and also inspires the region's star chefs.

Original Title: Garten Eden in Franken

Year: 2016

Produced by: DHF, Autentic
