# FUTURE OF MOBILITY

3 x 30' (ENG, GER)

**The future of mobility is automation. Trademarked by digitalization and void of human error, prospective vehicles will allow us to travel safely with an added bit of flair.**

From a global standpoint, industries have found themselves at the cusp of an unprecedented change. Digital transformation has created new infrastructures, business models and technologies. Mobility is now being transformed into another big data application that facilitates the transportation of people and freight without human input. It's the beginning of a new epoch and we are doing our part in recording history by casting a gaze on the digitization of mobility. Change at the interface between humankind and machines! Witness the future of mobility.

Original Title: Die Digitalisierung der Mobilität  
 Year: 2017
